Emergence: Morphogenetic Design Strategies by ISBN 0470866888

Emergence is an important new concept in artificial intelligence, information theory, digital technology, economics, climate studies, material science and biometric engineering.

It is a development which is set to inform not only the construction of buildings, but also the composition of new materials. As a new science, coupled with material and technological innovations, it is set to enter architecture into a new phase of transition.

This book presents an account of related developments in artificial intelligence and evolutionary computation, and shows how these developments are being incorporated into new architectures.

- This book marks the introduction of a new topic in design

- Includes high quality CAD images
- Accompanies a travelling exhibition, showing in Oslo and Copenhagen
- Includes interviews with Frei Otto and a review of the Advanced Geometry Group at Ove Arup and Partners
