Mad Science 2: Experiments You Can Do At Home, But STILL Probably Shouldn't by Theodore Gray ISBN 1579129323

Best-selling author Theodore Gray is back with all-new, spectacular experiments that demonstrate basic principles of chemistry and physics in thrilling, and memorable ways.

For nearly a decade, Theodore Gray has been demonstrating basic principles of chemistry and physics through exciting, sometimes daredevil experiments that he executes, photographs, and writes about for his monthly *Popular Science* column "Gray Matter."

Theo Gray's Mad Science: Experiments You Can Do at Home, But Probably Shouldn't, published by Black Dog in 2009, collected Gray's *Popular Science* columns, along with hundreds of photographs, many of which were not published with the original columns.

Now comes the second volume of mad-scientist experiments, which includes more dramatic, enlightening, and sometimes daring demonstrations in which Gray dips his hand into molten lead to demonstrate the Leidenfrost effect; crushes a tomato between two small magnets to demonstrate the power of neodymium-iron-boron magnets; and creates trinkets out of solid mercury to demonstrate how the state of matter depends very much on the temperature at which it exists.

Other experiments include:

A foil boat floating on an invisible sea!

DIY X-ray photos!

A bacon lance that cuts steel!

Charging a smart phone with apples and pennies!

And dozens more!
