Immunochemistry: The Application of the Principles of Physical Chemistry to the Study of the Biological Antibodies (Classic Reprint) by Svante Arrhenius ISBN 1330807634
Excerpt from Immunochemistry: The Application of the Principles of Physical Chemistry to the Study of the Biological Antibodies

The following pages contain a summary of six lectures on the Immunity Reactions delivered at the University of California, in Berkeley, California, during the summer session of 1904. The object of

the lectures was to illustrate the application of the methods of physical chemistry to the study of the theory of toxins and antitoxins. The idea that the reciprocal action of toxin and antitoxin is of the same nature as a chemical reaction is nearly as old as the study of these phenomena, which was inaugurated by the discovery of the diphtheria antitoxin by Behring and Kitasato in 1890. The German school, led by Ehrlich, the renowned Director of the Prussian Serum Institute in Frankfurt-on-the-Main, has in particular done much work in support of the opinion that the interaction of toxin and antitoxin is of the nature of a chemical reaction; whereas the French school, led by Metschnikoff, tried to show that the effect of an antitoxin is chiefly of physiological order, an antitoxin was supposed to stimulate in some way the organic tissues in their struggle against the attack of the poison.

About the Publisher

Forgotten Books publishes hundreds of thousands of rare and classic books. Find more at www.forgottenbooks.com

This book is a reproduction of an important historical work. Forgotten Books uses state-of-the-art technology to digitally reconstruct the work, preserving the original format whilst repairing imperfections present in the aged copy. In rare cases, an imperfection in the original, such as a blemish or missing page, may be replicated in our edition. We do, however, repair the vast majority of imperfections successfully; any imperfections that remain are intentionally left to preserve the state of such historical works.

Immunochemistry: The Application of the Principles of Physical Chemistry to the Study of the Biological Antibodies (Classic Reprint) Review

This Immunochemistry: The Application of the Principles of Physical Chemistry to the Study of the Biological Antibodies (Classic Reprint) book is not really ordinary book, you have it then the world is in your hands. The benefit you get by reading this book is actually information inside this reserve incredible fresh, you will get information which is getting deeper an individual read a lot of information you will get. This kind of Immunochemistry: The Application of the Principles of Physical Chemistry to the Study of the Biological Antibodies (Classic Reprint) without we recognize teach the one who looking at it become critical in imagining and analyzing. Don't be worry Immunochemistry: The Application of the Principles of Physical Chemistry to the Study of the Biological Antibodies (Classic Reprint) can bring any time you are and not make your tote space or bookshelves' grow to be full because you can have it inside your lovely laptop even cell phone. This Immunochemistry: The Application of the Principles of Physical Chemistry to the Study of the Biological Antibodies (Classic Reprint) having great arrangement in word and layout, so you will not really feel uninterested in reading.
