Data Mining In Time Series Databases (Series in Machine Perception and Artificial Intelligence) by Mark Last, Abraham Kandel, Horst Bunke ISBN 9812382909

Adding the time dimension to real-world databases produces Time Series Databases (TSDB) and introduces new aspects and difficulties to data mining and knowledge discovery. This manual examines state-of-the-art methodology for mining time series databases. The novel data mining methods presented in the book include techniques for efficient segmentation, indexing, and classification of noisy and dynamic time series. A graph-based method for anomaly detection in time series is described and the text also studies the implications of a novel and potentially useful representation of time series as strings. The problem of detecting changes in data mining models

that are induced from temporal databases is additionally discussed.

Data Mining In Time Series Databases (Series in Machine Perception and Artificial Intelligence) Review

This Data Mining In Time Series Databases (Series in Machine Perception and Artificial Intelligence) book is not really ordinary book, you have it then the world is in your hands. The benefit you get by reading this book is actually information inside this reserve incredible fresh, you will get information which is getting deeper an individual read a lot of information you will get. This kind of Data Mining In Time Series Databases (Series in Machine Perception and Artificial Intelligence) without we recognize teach the one who looking at it become critical in imagining and analyzing. Don't be worry Data Mining In Time Series Databases (Series in Machine Perception and Artificial Intelligence) can bring any time you are and not make your tote space or bookshelves' grow to be full because you can have it inside your lovely laptop even cell phone. This Data Mining In Time Series Databases (Series in Machine Perception and Artificial Intelligence) having great arrangement in word and layout, so you will not really feel uninterested in reading.
