Developing Web Information Systems: From Strategy to Implementation by Richard Vidgen ISBN 0750657634

Developing Web Information Systems brings together traditional system development methods that have been taught for many years on information systems and computer science courses with web/e-commerce development. It is the first book to bring together IS development and the web applications in a thorough and systematic way. There is a running case study that illustrates web IS development from start to finish. The case is easy to understand (a theatre) and results in a working web application. Most, if not all, analysis and design texts fall short of making that step into software.

The book draws heavily on practical experiences of web-based IS development resulting from

commercial system development, so as well as appealing to students and academics, it will also interest practitioners. The coverage of data management and e-business strategy gives the book the broader scope essential for understanding IS development properly in an Internet context.

- * First book to bring together IS development and web applications thoroughly and systematically.
- * Covers full development process from strategy, through analysis and design, to working software.
- * Interactive case study which can be accessed on author's website.
