Technology, Design and Process Innovation in the Built Environment (Spon Research) by ISBN 0415462886

Buildings and infrastructure represent principal assets of any national economy as well as prime sources of environmental degradation. Making them more sustainable represents a key challenge for the construction, planning and design industries and governments at all levels; and the rapid urbanisation of the 21<sup>st</sup> century has turned this into a global challenge.

This book embodies the results of a major research programme by members of the Australia Co-

operative Research Centre for Construction Innovation and its global partners, presented for an international audience of construction researchers, senior professionals and advanced students. It covers four themes, applied to regeneration as well as to new build, and within the overall theme of Innovation:

- Sustainable Materials and Manufactures, focusing on building material products, their manufacture and assembly – and the reduction of their ecological ‘fingerprints’, the extension of their service lives, and their re-use and recyclability. It also explores the prospects for applying the principles of the assembly line.
- Virtual Design, Construction and Management, viewed as increasing sustainable development through automation, enhanced collaboration (such as virtual design teams), real time BL performance assessment during design, simulation of the construction process, life-cycle management of project information (zero information loss) risk minimisation, and increased potential for innovation and value adding.
- Integrating Design, Construction and Facility Management over the Project Life Cycle, by converging ICT, design science engineering and sustainability science.
- Integration across spatial scales, enabling building–infrastructure synergies (such as water and energy efficiency). Convergences between IT and design and operational processes are also viewed as a key platform increased sustainability.

## **Technology, Design and Process Innovation in the Built Environment (Spon Research) Review**

This Technology, Design and Process Innovation in the Built Environment (Spon Research) book is not really ordinary book, you have it then the world is in your hands. The benefit you get by reading this book is actually information inside this reserve incredible fresh, you will get information which is getting deeper an individual read a lot of information you will get. This kind of Technology, Design and Process Innovation in the Built Environment (Spon Research) without we recognize teach the one who looking at it become critical in imagining and analyzing. Don't be worry Technology, Design and Process Innovation in the Built Environment (Spon Research) can bring any time you are and not make your tote space or bookshelves' grow to be full because you can have it inside your lovely laptop even cell phone. This Technology, Design and Process Innovation in the Built Environment (Spon Research) having great arrangement in word and layout, so you will not really feel uninterested in reading.
