Experimental Thermodynamics Volume X: Non-equilibrium Thermodynamics with Applications by  
ISBN 1782620249

The book covers recent developments in the theory of non-equilibrium thermodynamics and its applications. Four chapters are devoted to the foundations; an overview chapter is followed by recent results addressing the underlying principles of the theory. The applications are concerned with bulk systems, with heterogeneous systems where interfaces are central and with process units in industry where entropy production minimization is useful. There is also a collection of chapters under the heading mesoscopic non-equilibrium thermodynamics, giving in the end an overview of extensions of the theory into the non-linear regime. Bringing the literature up to date

and detailing new approaches in this area of research, it is aimed at a predominantly, but not exclusively, academic audience of practitioners of thermodynamics and energy conversion.

## **Experimental Thermodynamics Volume X: Non-equilibrium Thermodynamics with Applications Review**

This Experimental Thermodynamics Volume X: Non-equilibrium Thermodynamics with Applications book is not really ordinary book, you have it then the world is in your hands. The benefit you get by reading this book is actually information inside this reserve incredible fresh, you will get information which is getting deeper an individual read a lot of information you will get. This kind of Experimental Thermodynamics Volume X: Non-equilibrium Thermodynamics with Applications without we recognize teach the one who looking at it become critical in imagining and analyzing. Don't be worry Experimental Thermodynamics Volume X: Non-equilibrium Thermodynamics with Applications can bring any time you are and not make your tote space or bookshelves' grow to be full because you can have it inside your lovely laptop even cell phone. This Experimental Thermodynamics Volume X: Non-equilibrium Thermodynamics with Applications having great arrangement in word and layout, so you will not really feel uninterested in reading.
