Cognition, Creativity, and Behavior: Selected Essays by Robert Epstein ISBN 0275944522

This diverse set of essays traces Epstein's experimental and theoretical work over a 15 year period. Four of the essays were coauthored by the eminent psychologist B.F. Skinner. The book demonstrates how the scientific study of behavior can increase our understanding and effectiveness in many domains: creativity and innovation, parenting, artificial intelligence, self-improvement, and even world peace. Reviewers have praised the volume as an impressive effort by one of America's most notable psychologists.

Epstein's goals in writing this book were (a) to present some relatively interesting papers that can stand alone and (b) to organize and edit them so that sections have some integrity and so that the

overall volume paints a fairly consistent picture of his evolving views on cognition, creativity, and behavior. Parts I and II focus on generativity research and theory and on some Columban (pigeon) simulations of human behavior, and Part III includes some related laboratory studies. Part IV is concerned with efforts to create a comprehensive science of behavior, and Part V includes essays about Skinner, one of the principle architects of behaviorism. Part VI includes forays into artificial intelligence, child rearing, categorization research, and other topics, and Part VII takes the volume to some uncertain reflections on growing older, and to a modest proposal for a day of world peace.
