The Medusa and the Snail More notes of a biology watcher by Lewis Thomas ISBN B002GFJ0Q2  
The medusa is a tiny jellyfish that lives on the ventral surface of a sea slug found in the Bay of Naples. These two organisms depend on each other for their survival. What a mix-up of selfness "The thought of these creatures gives me an odd feeling. They do not remind me of anything, really. They are bizarre, that's it, unique. And at the same time, like a vaguely remembered dream, they remind me of the whole earth at once." Readers and admirers of Lewis Thomas will not be surprised to find themselves bound up in the fate of the medusa and the snail; it is one of Dr. Thomas's genial qualities that he brings the the most unlikely yet completely apposite observations to bear upon the eternal issues of life and death.
