Language as a Complex System: Interdisciplinary Approaches by Gemma Bel-Enguix ISBN 1443817627

Language is one of the most challenging issues that remain to be explained from the physiological and psychological points of view. As a complex system, its formal modelling and simulation present important difficulties. Models proposed up to now have not been able to give either a coherent explanation of natural language or a satisfactory computational model for the processing of natural language. To investigate natural language, we need to cross traditional academic boundaries in order to solve the different problems related to language. This book is an attempt to connect and integrate several academic disciplines and technologies in the pursuit of a common task: the study of language. The main goal of the book is to boost the interchange of knowledge and viewpoints between specialists who, working on linguistics, biology or computation, have an interest in

bringing their methods together in order to provide innovative and challenging tools and formalisms to approach and improve theories and models on languages. The subject of this book will attract researchers from many fields who are interested in natural or artificial languages and want to enrich their scientific research with theories, methods and ideas coming from different disciplines. People dealing with linguistics, computer science, formal language theory and biology may find in this book new and challenging ideas.
