## Superforecasting: The Art and Science of Prediction PDF

Superforecasting: The Art and Science of Prediction by Philip E. Tetlock, Dan Gardner ISBN 0804136696

A New York Times Bestseller

## An Economist Best Book of 2015

"The most important book on decision making since Daniel Kahneman's *Thinking, Fast and Slow.*"

-Jason Zweig, The Wall Street Journal

Everyone would benefit from seeing further into the future, whether buying stocks, crafting policy,

launching a new product, or simply planning the week's meals. Unfortunately, people tend to be terrible forecasters. As Wharton professor Philip Tetlock showed in a landmark 2005 study, even experts' predictions are only slightly better than chance. However, an important and underreported conclusion of that study was that some experts do have real foresight, and Tetlock has spent the past decade trying to figure out why. What makes some people so good? And can this talent be taught?

In *Superforecasting*, Tetlock and coauthor Dan Gardner offer a masterwork on prediction, drawing on decades of research and the results of a massive, government-funded forecasting tournament. The Good Judgment Project involves tens of thousands of ordinary people—including a Brooklyn filmmaker, a retired pipe installer, and a former ballroom dancer—who set out to forecast global events. Some of the volunteers have turned out to be astonishingly good. They've beaten other benchmarks, competitors, and prediction markets. They've even beaten the collective judgment of intelligence analysts with access to classified information. They are "superforecasters."

In this groundbreaking and accessible book, Tetlock and Gardner show us how we can learn from this elite group. Weaving together stories of forecasting successes (the raid on Osama bin Laden's compound) and failures (the Bay of Pigs) and interviews with a range of high-level decision makers, from David Petraeus to Robert Rubin, they show that good forecasting doesn't require powerful computers or arcane methods. It involves gathering evidence from a variety of sources, thinking probabilistically, working in teams, keeping score, and being willing to admit error and change course. *Superforecasting* offers the first demonstrably effective way to improve our ability to predict the future—whether in business, finance, politics, international affairs, or daily life—and is destined to become a modern classic.

## Superforecasting: The Art and Science of Prediction Review

This Superforecasting: The Art and Science of Prediction book is not really ordinary book, you have it then the world is in your hands. The benefit you get by reading this book is actually information inside this reserve incredible fresh, you will get information which is getting deeper an individual read a lot of information you will get. This kind of Superforecasting: The Art and Science of Prediction without we recognize teach the one who looking at it become critical in imagining and analyzing. Don't be worry Superforecasting: The Art and Science of Prediction can bring any time you are and not make your tote space or bookshelves' grow to be full because you can have it inside your lovely laptop even cell phone. This Superforecasting: The Art and Science of Prediction having great arrangement in word and layout, so you will not really feel uninterested in reading.
